To Hugh Everett
Arlington Towers T-438
Arlington, Virginia

Dear Hugh - I phoned your place
3 times on my last visit to Washington,
Thurs. night and Friday June 21 but
you must have been "on location". I
arrived here a month ago & am very
happy at this quiet place to work.

July 15 and 16 I attended
a conference on new methods in quantum
theory at Brandeis Univ. Norbert Wiener
spoke about his continuous geometry,
emphasizing the need for a measure
on states, giving one, emphasizing
that there are many other alternatives,
but reasoning that they are all
equivalent. In conversation with me
he argued strongly that one has to
have a measure in your theory.

Could you not write up a 7-typewritten
page draft of a possible note on this

P.S. - May I keep the Wiener Siegel reprint? But of course
I'll send it to you if he can't supply you with
another [Otype Rev 91, 1551 (1953)].

subject for submission to him &
me with the idea it would go
in Phys. Rev. after it had been

modified to meet all objections?

Perhaps there's more you'd like to
add - but is there any issue
outstanding that's more central
to the future discussion that will
occur on your paper? Like
basketball, so here I believe the
way to win is to keep every player
covered!

Bohr is likely to be in
Washington Oct 24. Don't you
want to write him & make
appointments for a series of
discussions with him?

You would be very interested
in & enjoy the "Anti-Review" of Landé'
in Nuclear Physics 3, 132 (1957). For
your information the L.R. referred to there
is Leon Rosenfeld.

If you ever get into this neighborhood,
remember we'd like to see you &
have an extra couple of seats. ~~I am Wheeler~~
