

One does not mind
or every element of
theory being measurable

(Viz Atomic Theory
.. Avogadro's No unknown
> 100 years)

Theory acts as a
whole to explain
phenomena --
no necessity that
elements behave
"independently".

Theory of UWT
is above all a precise,
clear, unmystical
way to understand
just those ^{out of them} ~~out of~~
assertions ^{of electrons} which
are made by Bohr
and called "complementary"
without leaving a
wide gaping vacuum
by ~~assertion~~ denying
the very possibility
of ever understanding
functioning of close
describ. meas. up!
