

Cambridge, August 3, 1957

Dear Mr. Everett.

Please excuse my long delay in answering  
your kind letter of May 31. I have been  
all the time on a trip abroad and did  
not receive your letter until my return  
to Cambridge four days ago.

Therefore, it may take some time before  
I have read your paper as carefully as it  
deserves to be written. At the first glance, your  
paper seems rather attractive to me. I have  
always disliked the traditional treatment of  
"measurement in Danton". They account of  
when it seems as if measurement would  
be a type of fact which is essentially

different from all other physical facts.

However, I shall reserve my judgment until I actually have studied your paper.

~~At~~ Anyways, I would like to receive from you paper and comment connected ~~with~~ with the general philosophical and historical problems which are connected with physical Theory,

Aft. Feb. 15 I shall be in New York, where I shall teach at Columbia University of Science during the Academic Year 1957/8.

Very much your

Philip Frank
